

STONE IMPREGNATOR 407

For All Porous Stones and Grout

DESCRIPTION

Stone Impregnator 407 is a water-based, fluoro-chemical treatment that penetrates into porous stone floors preventing oil and water based soils from penetrating the stone. By keeping the stain and soil on the floor's surface, this product protects the floor and makes it easier to clean. This product will not alter the stones' natural appearance and does not require special maintenance.

INSTRUCTIONS

Be sure the floor is clean and dry before proceeding. Use as is. Do not dilute. Apply using a finish mop and bucket or pour directly on the floor and spread using a mop, squeegee or finish applicator. Allow to dry 30-40 minutes. BEFORE applying second coat check if the stone will absorb additional material by testing a small area. If product remains on the surface and is not quickly absorbed another coat is not needed

FEATURES

- Water based
- Resistant to oil and water based stains
- Does not affect slip resistance
- Can be applied to damp surfaces
- Advance fluoro-chemical technology
- Excellent for grout joints

SPECIFICATIONS

Appearance:	Clear Liquid	pH:	7-8
Odor:	Low	Detergency:	None
Specific gravity:	1.01	Flammable:	None
