The Simoniz® Power Blend System, P-50 tank and the KimTek Dual Feed Porportioner are the most economical way to apply presoak and wheel cleaner in an In-Bay or Conveyorized carwash. The P-50 supplies a “virtually fully saturated” alkaline source that can be blended with our unique Power Blend surfactants. The alkaline solution should run through the 506 inductor and the surfactant through the 203CT.

The table at left is provided as a reference only. Always titrate for accurate results. The table will indicate which direction to go with various tips to achieve different results. Adjust surfactant for show, because it is the most expensive component.
